

Please do not restrict satellite radio providers from covering local information, such as traffic and weather. Please reject the NAB's petition 04-160.

I pay for my satellite radio services and I find the local information very useful. Local radio stations do not report on this information during all times of the day. Many of the areas I often drive in (such as Santa Cruz, CA and San Francisco) often have traffic problems during off-peak hours (think of the tourist traffic in Santa Cruz, protests in SF, etc.). In addition, the weather in one part of the bay area can be drastically different from the weather just 20 minutes away!

Again, please reject the NAB's petition 04-160.

Thank you,
Dorian
